

Task Lighting for Manufacturing & Quality Inspection of Circuit Boards

Anser Spot

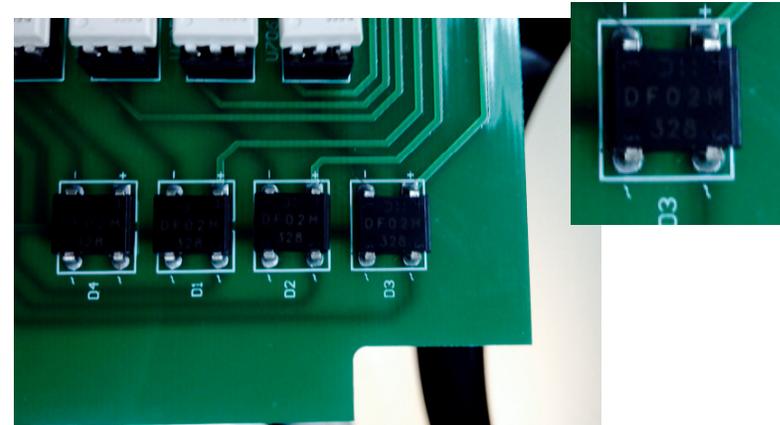

Quality Inspection of Circuit Boards with the Anser

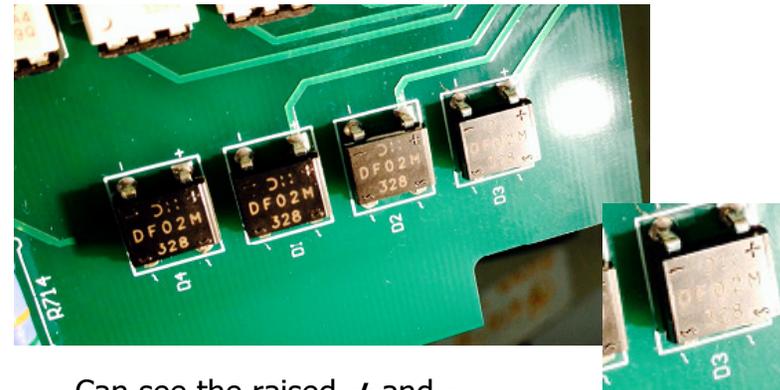

The Anser by Littlite is our newest product, and with the light coming out the end of the hood it's a great inspection light.

Our sister company Leprecon manufactures lighting consoles for the music and other industries. In one of their manufacturing processes they need to ensure the +/- orientation of chips, and the raised marks are hard to see. They use the Anser to see these marks more easily which you see in the photos to the right. This light is used both in the installation of these chips and the inspection. It helps save time and money if they are installed in the correct orientation at the start.

The Anser has a flexible gooseneck and high quality clean lighting, which makes it ideal for this task. It has a color temperature of 3100K and a CRI of 95. To learn more about Littlite and the Anser go to www.littlite.com. To learn more about Leprecon and their consoles go to www.leprecon.com

Cannot see the raised + and - embossed marks on the chip

Can see the raised + and - embossed marks on the chip
