Littlite LED-Improvements!

Clear Lens

Littlite LED task lights now include a clear lens integrated into the hood. The snap-in lens protects the circuit board and provides a clean, finished look to our LED products.

More Output

While we were under the hood we did some mojo and squeaked out a little more light output. . .about a 12% improvement.

The Best Part

These improvements come at no change in cost, no model number changes and no obsoleting of previous models.

The Numbers

155 Lux, 135mA draw at 12 volts.
